Advisory Action and Response to Arguments

Applicant's argument filed 03/24/05 have been fully considered but they are not persuasive.

In response to Applicant's Remarks on page 2, applicants argue: "Applicants note that the Office Action asserts that Forssen teaches applicants' claim 1 limitation in column 4, lines 36-67. However, that section of Forssen actually teaches that a signal received at an antenna array from a mobile station is used to characterize the position of the mobile station as a function of measured power. This is clearly different from, and perhaps the opposite of, what is claimed in applicant's claim 1, because applicants' claim 1 requires that the amount energy directed towards a terminal be a function of 1) the location and 2) the acceptable receive strengths, of at least two the terminals."

Examiner respectfully disagrees because Forssen discloses that a signal received at an antenna array from a mobile station is used to characterize the position of the mobile station as a function of measured power, as stated above by applicants. It is clearly that Forssen discloses what is claimed in applicant's claim 1. That is the amount energy directed towards a terminal be a function of 1) the location and 2) the acceptable receive strengths, of at least two the terminals."

Applicants argue on page 3: " The Office Action has cited Fukagawa only for its teaching that the direction of its antenna is in an azimuth direction. Thus, the Office Action seems to indicate, and applicants agree, that Fukagawa does not supply the element of applicants claim 1 that was shown hereinabove not to be taught by Forssen. Therefore the combination of Forssen with Fukagawa does not teach or suggest all of the limitations in applicants' claim 1".

Examiner respectfully disagrees because the combination of Forssen with Fukagawa does teach or suggest all of the limitations in applicants' claim 1, as explained in the Office Action...
